## **SaniTarp®: Innovative Concrete Refurbishment for Biogas Tanks Minimizes Downtime and Boosts Efficiency**

**Neuhaus am Inn, January 14, 2026** – AGROTEL GmbH presents **SaniTarp®**, a patented concrete refurbishment membrane that reliably protects biogas tanks from corrosion caused by aggressive gases such as hydrogen sulphide. The retrofit membrane extends the service life of fermenters, secondary digesters, and digestate storage tanks, reduces downtime, and increases the economic efficiency of biogas plants.

### **Professional Protection for Existing Installations**

Insufficiently protected concrete in biogas tanks can lead to severe damage, spalling, and costly operational interruptions. With SaniTarp®, operators can refurbish existing tanks and resume plant operations shortly afterwards – thanks to its **quick and easy installation**, which can be done in all weathers and without long shutdowns.

### **Sustainable, Custom Concrete Refurbishment for Biogas Tanks**

The membrane consists of a gas-tight, chemically resistant PP coating on a stable fabric backing. It protects not only the tank wall, but also the tank supports and crown. The material is thermally robust and durable, and the joints are professionally welded – ensuring permanent sealing, as verified by the Fraunhofer Institute.

AGROTEL produces SaniTarp® custom-made to size to ensure optimal fit and unbeatable protection. Even complex tank geometries are reliably protected – for the lifetime of the tank.

### **About AGROTEL CenoTec**

AGROTEL GmbH CenoTec is a leading manufacturer of biogas components, offering textile solutions for efficient, flexible gas storage, including large-volume double-membrane gas tanks as well as the concrete protection membranes SaniTarp® and WireTarp®. As an internationally active family-owned company with headquarters and production in Germany, AGROTEL stands for quality, durability, and tailored solutions.
